Our Philosophy

The team at CommandFusion (CF) is passionate about making automation software and hardware simple (yet powerful), reliable and affordable. We have gone to great lengths to source like-minded veterans throughout the world to make this a reality.

We also recognise that community efforts are often more powerful and productive than our own, and as such our communication protocols for both software and hardware are fully published in detail. Community involvement is a vital part of our product evolution, utilising online groups and chat systems where CommandFusion engineers and support staff regularly engage with customers. This streamlines our support system whilst providing excellent resources to all customers globally.

Product Design

In both hardware and software design, our focus is to ensure flexibility, reliability, interoperability and planning for the future.

With software, this is reflected in the flexibility of GUI design, and a Regular Expression and JavaScript engine which can handle two-way communication with any networked device, parsing data into meaningful UI elements.

With hardware, CF has chosen a wired approach which can then be made wireless. Wired solutions are inherently more reliable and secure. CFLink BUS testing has been undertaken for over a year prior to commercial release, and our products are proven capable of withstanding common miswiring faults, voltage fluctuation and drops.

Manufacturing

Components for CF hardware are carefully chosen, the majority of which are either from the USA or Japan. Most of our hardware products are over 50% content from the USA, and the contract manufacturer is a large American contract manufacturer with medical and military certification.

Final assembly is currently executed in Malaysia, and shipping is done from our warehouse in Malaysia. Shipping and RMA hubs are constantly added in strategic locations and steps are currently underway for North America and EU to have local hubs or representatives.

Environment

We also strive to ensure our products are environmentally friendly, with brown cardboard packaging and minimal or no use of plastic packaging.
Why Choose CommandFusion?

CommandFusion designs and manufactures a range of automation and control hardware and software.

Create the ultimate control system

Combine the flexibility of the modular hardware range with the power of iViewer on your mobile device to control almost anything, whether it's a residential, commercial or any other project with automation.

Build your system the way YOU want it

Because of its modular design, it’s super easy to design a control system using CommandFusion hardware that suits your projects' unique requirements and budgets.

Need more infrared outputs? Simply add a MOD-IR8 module to your MOD4! Then easily expand your home automation network into other areas by adding new devices via the CFLink bus or a standard ethernet network.

This means that you aren’t paying for features you don’t need, and the system can grow as you expand it throughout your home or office.

When you have your control hardware set up, easily control it (and any other IP-enabled device) with iViewer for Mobile Devices. iViewer allows you to create a graphical user interface that looks any way you want, and right on your own iOS or Android device!

Control your house with CommandFusion

Use CommandFusion to create the ultimate smart home. Think of our hardware as the connectivity to all your stand-alone items. Then use iViewer to control everything from one easy-to-access control panel - your phone or tablet!

Some of the systems that are easily connect with CommandFusion:

- Home Theater (TV, Surround Sound, Projector)
- Lighting, Blinds, Curtains
- Heating/Cooling (HVAC)
- Security Alarm, CCTV
- Door Locks, Access Control

Perfect for any user: DIY or Professional Integrator

Whether you are a DIY user or a professional integrator, CommandFusion products are designed for you.

Integrators will enjoy the modular design, and the cost effectiveness will allow you to compete with integrators that are using much more elaborate systems.

DIY users will benefit from the features and potential savings. Support at CommandFusion is unparalleled with easily accessible service.

www.commandfusion.com
Abundant applications

CommandFusion products are not limited to home automation. They have been used in many different applications, some examples of these are:

- Commercial spaces
- Marine vessels & Aircraft
- Luxury automobiles
- Emergency response vehicles
- Educational institutions
- Houses of worship
- Residential applications
- OEM products

Open Protocols - Communicate with any system

Control is limitless. We want to allow you to choose components that best suit your requirements, which is why we have implemented open protocols which allow for easy communication with other control systems and services.

This means you can easily connect CommandFusion hardware and software with other brands of control systems such as Crestron, Control4, Global Cache etc.

iViewer for Mobile Devices

Our app for Apple iOS and Android devices allows you to control any IP-enabled devices, including our own hardware, directly from your iPad, iPhone, Android device, etc.

- Fully customisable GUI
- Control anything via Ethernet / Wi-Fi
- Dynamic feedback processing
- Javascript API
- Utilise advanced device sensors and features
- iOS/Android support
- Choose a version to suit your requirements

Hardware Agnostic

iViewer is hardware agnostic, where it does not rely on a certain type of equipment to be able to talk to your devices.

Examples of products iViewer can integrate with:

- CommandFusion hardware
- Crestron, AMX, Control4, RTI
- Lutron, C-Bus
- Zigbee, Z-Wave, Insteon
- KNX
- Global Cache
- RGB Controllers

Hardware Overview

CommandFusion manufactures a range of automation and control hardware, accessible to professional integrators and DIY users.

- Modular approach - add modules and other devices to create a tailored system that grows with you
- Extremely cost effective
- Distributed intelligence - a single processor failing will not affect other units
- Ethernet connectivity and CFLink bus
- Industry-leading 5 year warranty
- Extremely low power consumption. 30-70% lower than similar products
Why Choose CFLink?

What is CFLink
CFLink is the communication bus used by our hardware. It is a 5-wire RS485 bus that is capable of carrying both power and data to devices over a maximum distance of 1.6 kilometers, not taking into account of power loss. Up to 238 devices can exist on a single network, and multiple CFLink networks can communicate with each other via Ethernet, providing an endlessly scalable system.

Cabling
CFLink can run on any cable with 5 or more cores, including CAT5/6 and 2-pair shielded cable. When using CAT5/6, you should use one pair for voltage+ and one pair for voltage- to decrease the voltage drop over longer runs.

CFLink can use any wiring topology, including daisy-chaining between devices, home runs or any combination of both. Most existing systems use a master-slave approach on their bus but CFLink is a true Peer to Peer bus where each device is an equal. This distributed intelligence results in a more reliable system because each unit remains fully functional even if one of the devices drops off the network whereas a master-slave system is completely dependent upon the master.

CFLink vs Standard RS485

Power Requirements
Existing powered 4-pin RS485 buses have some common issues which CFLink overcomes. The first is a fixed voltage requirement which results in a low tolerance for voltage drops over longer cable distances. CFLink operates from 9-30v DC with low power consumption resulting in exceptional tolerance for long cable runs without adding more power supplies.

The second is the addition of a 5th isolated ground for data to prevent interference from ground loops in large scale projects.

Peer to Peer Bus
Without a master, CFLink will continue to function even if multiple devices fail since each device stores its own relevant logic processing.

Device ID Conflict Resolution
Typically each device on RS485 will have its own unique ID per model, resulting in an ID conflict when multiple units of the same model are put on a single network. With CFLink, this conflict is automatically resolved with a single click of the mouse using our configuration software.

Tolerance for miswiring
CFLink devices have exceptional tolerance for miswiring, including shorting all cables together, or applying power to any pin incorrectly. Built-in fuses automatically reset once the fault is rectified and CF devices will resume normal operation.

CFLink vs Ethernet

Flexible Cabling and Topology
CFLink’s wiring topology is very flexible. Ethernet would require each device to be wired to a switch or hub, whereas CFLink can loop from device to device, home run or any combination of both.

Cable Type
CFLink can use almost any cable as long as it has 5 wires (or 4 wires and shield, or even just 4 wires if that is the only available option). Ethernet is limited to particular cables – Cat5/6, etc. This has obvious advantages for retrofitting.

Cabling Distance
Ethernet can only run 100m on standard cabling whereas CFLink can run in excess of 1.6 kilometers without repeaters, fibre or other extenders.

Device Management
Each CFLink network need only take up a single IP address, allowing for ease of IP management and reduction of IT infrastructure needs.

High Reliability, fewer points of failure
 Longer cable runs (up to 1.6 km)
 Low Maintenance
 Flexible topologies and power distribution
 Lower hardware cost

www.commandfusion.com
**Reliability**
- By sitting on its own isolated BUS, automation devices will continue to function in the event of network outage.
- Whereas an Ethernet system can be challenging with issues arising from cabling, routers, switches, Wi-Fi, IP conflicts, rogue devices and so on, automation on its own network greatly increases its reliability.
- Traffic on Ethernet can be very significant in today’s environment with the use of IP cameras, media players and so on. By being on its own bus, CF hardware is unaffected by Ethernet traffic and additionally not adding to it.

**Cost**
- Implementing CFLink is very much cheaper compared to Ethernet. Cables can be easily looped or joined together without the need for switches, routers, repeaters, fibre-extenders and expensive patch cables.

**Wi-Fi**
- Wireless technology is inherently less reliable than a wired system. It is possible to convert CFLink to Wi-Fi by use of off the shelf wireless bridges or routers if needed, but it does not need to be built in to all of our hardware.
- Many commercial installations do not permit wireless networks in their offices for security purposes.

The Solo is perfect for controlling a single room, or used to create a larger control system.

Built-in Ethernet port for quick network connectivity.

Web administration page built in for simple configuration of:
- Schedules
- Rules (event triggered macros)
- Port testing and status

Includes two expansion slots to customise your controller to suit requirements:
- Easily add Wi-Fi connectivity via the first communication expansion slot. Future proof for other communication standards.
- Easily add additional control ports via the second expansion slot using our plugin cards.

Quickly and easily create a customised interface to control your system from your mobile device via iViewer.

Utilises open protocols to easily integrate with other systems.

Built-in IR Blasters on 3 sides to flood and control anything in the room.

USB device compatibility to allow for USB control and powering of the Solo.

USB Host capability for future expansion.
Nano-LAN, Nano-WIFI, Nano-E
Ultrasmall Modular IP Control System

1. Choose LAN or Wi-Fi

2. Add up to 7 expansion units

Due in the second half of 2014, the Nano is an intelligent modular IP control system used to connect any device to your network.

Select Wi-Fi or Ethernet connectivity as the base unit, then add on up to 7 expansion cards, giving you the flexibility to control as many devices as you need.

Both the Nano-LAN and Nano-WIFI base units feature a variety of on-board control ports for standalone operation, which can be expanded using the NANO-E and plugin CARD units.

Web administration page built in for simple configuration of:
- Schedules
- Rules (event-triggered macros)
- Port testing and status

Utilises openly documented protocols to allow easy integration with other systems.

Quickly and easily create a customised interface to control your system from your mobile device via iViewer.

USB device compatibility to allow for USB control and powering of the Nano and connected expansion units.

---

NANO-LAN/WIFI MAIN FEATURES
- Power 9-30VDC (2-pin) or USB powered (5VDC, Mini USB)
- 1 x RS232 bi-directional port via 3.5mm 4-pin jack
- 1 x Dry Contact Input via 3.5mm 4-pin jack
- 3 x IR Emitters via 3.5mm 4-pin jack. Port 3 can be used as external IR blaster
- 1 x IR Blaster onboard (two IR diodes for long distance and wide angle coverage)
- 1 x Onboard IR Learner/Receiver, 38KHz capable
- 1 x Ethernet port, RJ45 (NANO-LAN only)
- 1 x Wi-Fi detachable antenna, RP-SMA (NANO-WIFI only)
- 1 x USB Device for PC communication and control
- 2 x Tactile switches for reset and setup
- Card edge expansion port, up to 7 NANO-E expansions
- RGB indicator ring for notifications, adjustable brightness
- Onboard real-time clock
- Wall-mounting hole patterns
- Built-in web configuration utility

NANO-E MAIN FEATURES
- Card edge expansion ports for connection to NANO-LAN/WIFI and additional NANO-E units.
- Card slot for accepting Expansion Card units (CARD models)
- RGB indicator ring to show notifications and status information, adjustable brightness
- Wall-mounting hole patterns

www.commandfusion.com
Available Plugin Cards

Communication Cards

CARD-WIFI
Wi-Fi communications card
Add wireless communications to the Solo.
802.11g

*Additional communications cards coming in 2015.

Expansion Cards

CARD-LRY3
Relay card
3 x 30VDC 1A relays (2 latching, 1 NC/NO)

CARD-COM4
Serial port card
2-4 configurable RS232/422/485 bi-directional serial ports

CARD-IR6
Infrared emitter card
6 x IR outputs, routable, stackable

CARD-IO4
Multi-purpose input/output card
4 x configurable I/O - dry contact, voltage, resistance, LED output

www.commandfusion.com
Solo + Nano
Modular & Expandable IP Control Systems

NANO-WIFI with 2 NANO-E expanders connected
Supported Platforms
- iOS (iPhone, iPad, iPod Touch) 4.3 and later
- Android 2.3 and later
- Windows, Mac & Linux via emulation

CommandFusion iViewer allows full two way remote control of any hardware or software capable of TCP/IP or UDP communications, directly from iOS or Android devices.

iViewer works seamlessly with our own CommandFusion hardware, as well as other systems such as Crestron, AMX, Control4, Global Caché, and any other product that can be accessed over ethernet or WiFi.

Our powerful iViewer automation engine lets you create beautiful, dynamic and animated users interfaces. Using our guiDesigner software, you have full control over how each page looks and interacts. You can fully customize the layouts, themes and interactions. Easily program animations and page transitions. Create commands and macros assigned to on-screen objects. assign actions to user gestures, and much more.

Advanced data processing is possible via our powerful data analysis engine, allowing you to automatically take action upon events received from the remote devices. In depth networking includes TCP, UDP with broadcast and multicast support.

For even more control, iViewer can be driven by JavaScript code. Our extensive programming interface allows controlling each and every aspect of the user interface and network communications. Powerful JavaScript modules provided by CommandFusion and third parties allow for unlimited extensibility and reusability.

For more information including documentation and quick start guides, see our website: http://www.commandfusion.com/iviewer.html
CommandFusion (CF) products are designed to simplify control system programming without compromising on functionality. CF hardware integrates easily with its mobile control apps and allows for sophisticated GUI control over any third-party device.

Direct control via user interfaces, event-driven automation as well as scheduling (using the LANBridge) are all easily programmed with the free Systems Commander software. Both CF software and hardware control protocol are fully published, allowing for CF devices to be seamlessly integrated with any other software or hardware.

The CFLink BUS supports more than 100 devices, which already makes for an extremely scalable solution. Further expansion is possible via ethernet, allowing for indefinite expansion.

The CFLink BUS is a 5-pin 9–30 volts DC powered bus with an isolated RS485 communication line. Every CFLink device has its own processor and memory, which allows for distributed processing, simplified programming as well as eliminating the reliance on a single processor.

**CFLink Cabling**

Without taking into account of power loss, standard Cat6 cabling can be used with distances over 1,000m (3,000ft) for individual runs. Cabling topology can be daisy-chain, star or a mix of both.

Available Modules

**MOD-HRY2**
Relay module
2 x 250VAC 15A latching (polarized) relays

**MOD-RY4**
Relay module
4 x 250VAC 5A non-latching normally-open relays

**MOD-LRY8**
Relay module
8 x 30VDC 1A latching (polarized) relays

**MOD-SSRY4**
Solid-state relay module
4 x 250VAC 2A non-latching normally-open solid-state relays

**MOD-IR8**
Infrared module
8 x IR outputs

**MOD-IO8**
Input/Output module
8 x configurable I/O - dry contact, voltage, resistance, LED output

**MOD-COM4**
Serial port module
2-4 x configurable RS232/422/485 bi-directional serial ports
The MOD-HRY2 is a 2-channel 15A latching relay module that fits into any modular controller.

- 2 x 250 volts AC 15A latching (polarized) relays

## Overview

The HRY2 module features 2 high voltage, high-amperage (250V AC, 15A) relay ports, and comes with on-board screw terminals for secure connections to external relay controlled high voltage devices. Plug it into a modular controller to add relay control ports to your system.

### Power On States

Each relay port can be configured to be in open, closed or resume last state on power up. And because the relays are latching (polarized), they will stay in their open or closed state even when power is lost.

### Extended Functionality

Most relay control systems out there allow you to set relays on or off, and require complex programming on a control processor to perform anything else. Our relay control protocol includes additional functionality such as a simple toggle command (so that you don't have to keep track of the relay state for basic toggle actions) and a pulsing command to pulse the relay closed for a time period, then opening again (of course, the time period is customisable as part of the protocol). Relay control has never been so easy.

---

The MOD-RY4 is a 4-channel 5A relay module that fits into any modular controller.

- **4 x 250 volts AC 5A non-latching normally-open relays**

**Overview**

The RY4 module features 4 high voltage (250V AC, 5A) relay ports, and comes with detachable screw terminal blocks for secure connections to external relay-controlled devices. Plug it into a modular controller to add relay control ports to your system.

**Power On States**

Each relay port can be configured to be in open, closed or resume last state on power up. Using the resume option, they will return to their open or closed state after a power loss.

**Extended Functionality**

Most relay control systems out there allow you to set relays on or off, and require complex programming on a control processor to perform anything else. Our relay control protocol includes additional functionality such as a simple toggle command (so that you don’t have to keep track of the relay state for basic toggle actions) and a pulsing command to pulse the relay closed for a time period, then opening again (of course, the time period is customisable as part of the protocol). Relay control has never been so easy.
**MOD-SSRY4**

4-channel 2A solid-state module

---

**Overview**

The SSRY4 module features 4 high voltage (250V AC, 2A) solid-state relay ports, and comes with detachable screw terminal blocks for secure connections to external relay-controlled high-voltage devices. Plug it into a modular controller to add relay control ports to your system. The benefit of solid-state relays are their extremely low noise (almost silent) switching, typical 10x faster switching, very much longer lifetime and more reliable (no moving parts).

**Power On States**

Each relay port can be configured to be in open, closed or resume last state on power up. Using the resume option, they will return to their open or closed state after a power loss.

**Extended Functionality**

Most relay control systems out there allow you to set relays on or off, and require complex programming on a control processor to perform anything else. Our relay control protocol includes additional functionality such as a simple toggle command (so that you don’t have to track of the relay state for basic toggle actions) and a pulsing command to pulse the relay closed for a time period, then opening again (of course, the time period is customisable as part of the protocol). Relay control has never been so easy.

---

The MOD-SSRY4 is a 4 channel 2A solid-state relay module that fits into any modular controller.

- 4 x 250 volts AC 2A non-latching normally-open solid-state relays
The MOD-LRY8 is an 8-channel latching relay module that fits into any modular controller.

- 8 x 30 volts DC 1A latching (polarized) relays

### Overview

The LRY8 module features 8 low voltage (30V DC, 1A) relay ports, and comes with spring terminals for quick and easy, yet secure connections to external relay-controlled devices. Plug it into a modular controller to add relay control ports to your system.

### Power On States

Each relay port can be configured to be in open, closed or resume last state on power up. And because the relays are latching (polarized), they will stay in their open or closed state even when power is lost.

### Extended Functionality

Most relay control systems out there allow you to set relays on or off, and require complex programming on a control processor to perform anything else. Our relay control protocol includes additional functionality such as a simple toggle command (so that you don't have to keep track of the relay state for basic toggle actions) and a pulsing command to pulse the relay closed for a time period, then opening again (of course, the time period is customisable as part of the protocol). Relay control has never been so easy.

The MOD-IO8 is an 8 channel I/O module that fits into any modular controller.

- 8 channels of I/O programmable to be either digital input, analog voltage or resistance input read or LED output.

**Overview**

The IO8 module features 8 user configurable I/O ports, and comes with spring terminals for quick and easy, yet secure connections to external inputs/sensors/outputs. Plug it into a modular controller to add I/O ports to your system.

**Notifications**

The IO8 can be setup to send notifications based on a configurable minimum change level per port. Notifications can be sent as a broadcast to all CFLink devices, to specific CFLink IDs or both.

**Dry Contact Input**

When a port is configured as a dry contact input, it will give a reading on it’s open/closed state. Used for button inputs, sensor triggers, etc.

**Resistance Reading Input**

When a port is configured as a resistance reading input, it can measure input ranging from 0 Ohm to 10,000 Ohm, in 100 Ohm increments. Used for light sensors, temperature sensors, etc.

**Voltage Reading Input**

When a port is configured as a voltage reading input, it can measure input ranging from 0V DC to 10V DC, in 0.1 Volt increments. Used for battery level sensors, video signal sensors, etc.

**LED Output**

When a port is configured as an LED output, it can be set to on or off state, 3.3V DC 1mA max.

www.commandfusion.com
The MOD-COM4 is a 2 to 4 channel COM module that fits into any modular controller.
- 2 to 4 channels of RS232, RS422 or RS485 serial communication ports

### Overview
The COM4 module features 2-4 user-configurable serial ports, and comes with spring terminals for quick and easy, yet secure connections to control external serial devices. Plug it into a modular controller to add serial port control to your system.

### Serial Ports
The number of available serial ports depends on the modes they are configured in. For instance, 4 separate ports can be defined for RS232 without flow control. But only 2 ports can be configured if both set to RS485.

### Passthrough Modes
Any device on the CFLink network, including the COM4 module, can be configured to passthrough their incoming and outgoing data to the LAN Bridge, for direct Ethernet access (TCP or UDP).

### Notifications
The COM4 can be setup to send notifications of incoming data per port. Notifications can be sent as a broadcast to all CFLink devices, to specific CFLink IDs or both.
The MOD-IR8 is an 8 channel infra-red module that fits into any modular controller.

- 8 channels of IR outputs for wired emitters
- On board IR library with over 500,000 non-unique codes

**Overview**

The IR8 module features 8 stackable IR outputs, and comes with spring terminals for quick and easy, yet secure connections to IR emitters. 8 x single-headed IR emitters are included. Plug it into a modular controller to add IR ports to your system.

**Advanced IR Control**

All modular controllers are capable of advanced IR functionality such as smooth IR repeating, on-board IR database and storing IR codes in on-board memory. The IR8 module can be used in any modular controller to take advantage of all this functionality.

**Stackable IR outputs**

Stackable IR outputs allow you to control more than one device from a single port. Either by using multi-headed emitters, or wiring multiple emitters to the same port.

CF Mini
Miniature integrated controller

The CF Mini is a multi-purpose all-in-one controller specifically designed for single room to mid-size installations.

- CFLink BUS device with independent processor and memory
- 1 x RS232 programming or RS232 port
- 8 x IR outputs for wired emitters, with onboard IR library for over 500,000 non-unique codes
- 4 channels of I/O either as digital input, voltage or resistance input read or LED output
- 4 x 30 volts DC 1A latching relay
- MicroSD slot for memory expansion
- Memory used for storage of IR Files and event triggering

Overview

The CF Mini is a powerful, all-in-one controller. It features 8 x IR outputs, 4 x configurable I/O ports, 4 x 30VDC latching relays and one RS232/Program port.

Featuring a variety of control methods in a single box, the CF Mini is perfect for single room installs such as home theatres and boardrooms, as well as distributed systems such as classrooms.

Combine with LAN Bridge

The CF Mini does not feature an Ethernet port. Instead, the CFLink port is used to expand your system with any other CFLink devices. The LAN Bridge is a perfect companion for the CF Mini, for a very affordable single room solution when controlled by a mobile device such as the Apple iPad.

Rules Engine

All CFLink devices, including the CF Mini, support a powerful rule triggering engine. This allows you to trigger macros to run when a specific event occurs - such as reading a specific value via the I/O ports, or on incoming data via the RS232 port. Using the rules engine, you can setup basic or complex automation actions.

On-board IR Database

All IR emitting devices in the CommandFusion range include an on-board IR database, with over 500,000 IR codes built in.

The LAN Bridge provides an Ethernet interface to all CFLink devices, supporting a variety of Ethernet protocols and communication options.

- CFLink BUS device with independent processor and memory
- 1 x Ethernet socket for wired LAN connectivity
- 1 x RS232 programming or RS232 port
- Realtime clock with scheduling support
- MicroSD slot for memory expansion
- Memory used for storage of IR Files and event triggering

**Overview**

The LAN Bridge is the Ethernet & RS232 gateway for all devices connected via the CFLink bus. It has many advanced networking features, including the ability to communicate via TCP Server, TCP Client, UDP Unicast and UDP Broadcast, all at the same time.

10 different communication slots can be defined, each with its own configuration of protocol type, port, and other options. A maximum of 25 total TCP socket connections can be shared between each defined slot.

**Scheduling**

The on-board realtime clock allows the LAN Bridge to be used for scheduling of events, as well as randomised “away mode” events for security reasons. The clock can be configured to sync with a time server to ensure it’s automatically updated in regions with Daylight Savings requirements.
The SW16 is a 16-channel button interface for custom-made button panels.

- CFLink BUS device with independent processor and memory
- 16 x digital inputs for buttons
- 16 x dimmable LED outputs for indicators
- 4 x dimmable LED outputs for backlight

**Overview**

The SW16 is used to interface physical buttons to the CFLink network. With 16 x Dry contact inputs, you can connect up to 16 momentary or toggle switches to control your automation system. The 16 channels of dimmable LED outputs allow you to show feedback states for the buttons, and 4 dimmable backlight LED outputs can be used to backlight your keypad if required.

**Dimmable LED Outputs**

The 16 dimmable LED outputs and 4 dimmable backlight LED outputs can be controlled via the CFLink protocol. This allows you to not only turn these LEDs on and off, but you can set the dimming level of the individual outputs, in 100 steps. There are also commands to ramp between levels, blink the LED (set number of times or continuously) and dim up/down in a loop. This means you can show all sorts of feedback states via these LED outputs. You could even use 3 channels of the LED outputs to drive a single RGB LED for multi-color feedback states.

**Custom Button Panels**

Although you could use any off the shelf button panel and wire the buttons up to the SW16, you could also create your own custom button panels to suit any task. Put a few buttons together on a wall plate material of your choosing, and create physical interfaces for industrial automation tasks.
IR Blaster
IR blaster and receiver

The IR Blaster can flood a room with IR and can be used standalone to convert any remote into a universal remote, with macro capabilities.

- CFLink BUS device with independent processor with on-board IR library with over 500,000 non-unique codes
- On-board IR blaster with over 270° coverage
- On-board IR receiver
- Independent second IR port for wired emitter
- Independent second wired IR receiver port
- MicroSD slot for memory expansion
- Memory used for storage of IR Files and event triggering

Overview
The IR Blaster is a multi-functional IR control device. Featuring a 270° IR blaster on-board, as well as an additional 3.5mm jack for an IR emitter, you get the best of both IR control worlds - room flooding and directional control.

IR Receiver
The on-board IR receiver and additional 3.5mm jack for an IR receiver (not included), provide a way use the incoming IR signal to trigger macros via the Rules Engine. So you can use any IR remote control to perform actions throughout your automation system, such as control your lights or security system.

IR Database & Storage
All IR emitting devices in the CommandFusion range include an on-board IR database, with over 500,000 IR codes built in. If the device you want to control doesn’t exist in the database, simply use our IR Learner to learn the IR codes and create an IR file ready for storage directly in the IR Blaster’s on-board memory.

IR Learner
USB Infrared Learner

The IR Learner is a tiny USB device capable of learning infrared remotes from 30kHz to 455kHz. It has also been engineered to handle long and complex infrared codes typically found in higher end split system air conditioners.

- IR learning from 30kHz to 455kHz
- Able to learn long IR codes
- Onboard IR library with over 500,000 non-unique codes
- Onboard IR blaster with over 120° coverage for testing

Overview
The only IR Learner you will ever need. About the size of a matchbox, the IR Learner is capable of learning any IR code and then testing it for accuracy via the on-board blaster output. The front IR window is used for learning, with the rear IR window housing the blaster output.

CONNECTIVITY & POWER
- Mini USB: Mini USB female connector (Type B), USB cable included.

FRONT PANEL
- IR Receiver: On-board infrared receiver, front facing, capable of learning 30kHz to 455kHz IR signals

REAR PANEL COMPONENTS
- IR Blaster: High-powered IR Blaster on-board, with over 120° coverage

TOP PANEL
- Power Indicator: Blue LED indicates power status
- Activity Indicator: Yellow LED indicates IR signal being sent or received
- Ready Indicator: Green LED indicates IR learning is completed
- Reset Button: Reset button used to restart the device

PHYSICAL
- Enclosure: Polycarbonate with dark grey matte finish
- Height: 17mm (0.67in)
- Width: 60mm (2.36in)
- Depth: 44mm (1.73in)
- Weight: 0.04kg (0.09lbs), Shipping 0.2kg (0.44lbs)
- Temperature: 5°C to 45°C (41°F to 113°F)
- Humidity: 20% to 85% RH, non-condensing
- Certification: FCC, CE, C-Tick

WARRANTY
- Warranty: 5 years limited warranty
IRE-Slim
Ultraslim Infrared Emitter

The ultimate IR probe - IRE-Slim is a tiny, inconspicuous, subtle and unobtrusive IR emitter without compromise.

- Only 2.4mm thin
- Thicker gauge figure 8 cable where it’s hidden - easy to extend
- Ultrathin cable where it’s visible
- Additional adhesive pads and IR shield included

Overview
The IRE-Slim emitter is an infrared probe designed by custom integrators, for custom integrators. Featuring the thinnest emitting head, slimist 3.5mm phono jack, smoothly designed wire gauge step down join and useful accessories.

Easy to Extend and Install
The wire gauge (thickness of wire) and figure 8 insulation allows it to be easily extended for longer cable runs. Every aspect of the cable has been designed and moulded to be as thin as possible without compromising on strength. The wire join is designed to be snag-free and the wire leading up to the emitter is ultra-thin to be as hidden as possible.

Added Accessories
Each IR emitter is shipped with two additional high quality 3M® sticker pads for reuse, as well as a moulded shield with 3M adhesive to cover the emitter and prevent external IR control or interference for the most reliable IR control possible.

RACKIT
Rack-mount kit

Overview
The RACKIT allows for one or two MOD4’s to be rack mounted in a standard 19" rack, taking up just 1RU height, great for those installations where rack space is at a premium. The RACKIT incorporates a number of cable management and installation features to ensure an easy, high quality installation.

Cable Management
Utilise the cable management features of the RACKIT to achieve a quality installation. Cable management features includes:
- Tie down locations to utilise cable ties and velcro strips
- Various cutouts to allow for flexible cable routing

Ease of Installation and Maintenance
The RACKIT was designed by integrators to allow for maximum ease of installation and access for maintenance.
- Spring loaded locking tabs
- Secondary screw locations for security
- Guides to ensure neat installation
- Sliding action of MOD4 with guide tabs to ensure access to modules is easy, without risk of connector damage or the unit falling out of the RACKIT
